

# FUTURE VISIONS

## Orthodontics Has Changed!

One thing is clear in today's rapidly changing orthodontic environment: Patients in the information age are far more aware of their options, and are far more empowered to get what they want when they want it. **What are today's patients looking for? What can I provide that will stand out from the crowd?**

The simple answer to both questions is **LIFETIME ESTHETICS**.

While functional treatment is well established in orthodontics, patients want more than just straight teeth. The emerging paradigm in our field is a global esthetic approach with emphasis on patient-centered interaction that enhances a good occlusion. Striving for esthetic excellence and involving patients in their treatment are critical to case acceptance and create the "raving fan" experience that drives practice growth.

How can you efficiently achieve these demanding goals? At Future Visions, you will learn to develop and implement a rock-solid process to achieve spectacular outcomes every time. The globally renowned **Soft Tissue Paradigm** provides a framework for the systematic evaluation, treatment planning, and interdisciplinary clinical execution to deliver the individual esthetic needs of each patient.

### In the *Future Visions Course*, you will learn:

- **Macroesthetics** – 3D treatment planning for the face that accounts for the aging process
- **Miniesthetics** – Focus on the soft and hard tissue attributes of the smile arc, gummy smiles, buccal corridors, incisor display, etc.
- **Microesthetics** – Hands-on instruction on superior case detailing techniques that make your cases stand out
- **Technology** – Breakthroughs in software and hardware that streamline workflow and delivery of care

# FUTURE VISIONS

## COURSE OUTLINE

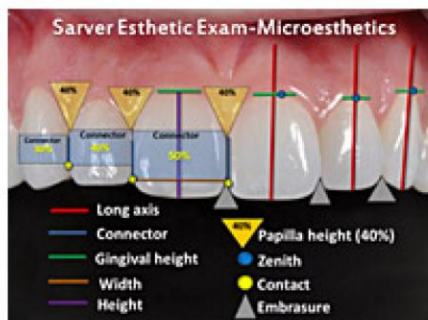

### THURSDAY- February 20, 2014

- The origin and fundamentals of the Soft Tissue Paradigm
- The classification of appearance and esthetics
- Macroesthetic principles, landmarks and ideal proportions
- The growing, maturing and aging face
- Appropriate timing of treatment in the adolescent patient
- Clinical communication and the fundamentals of case presentation

### FRIDAY- February 21-2014

- Miniesthetic principles, landmarks, and ideal proportions
- Smile definitions
- Systematic clinical evaluation of the smile
- How the smile changes with time and its impact on our treatment plans
- Biomechanics, bracket placement and coordination of occlusal goals with esthetic goals
- The treatment presentation of miniesthetics
- Introduction to microesthetics

### SATURDAY- February 22, 2014

- Microesthetics that includes tooth shape proportion
- Principles of assessment
- The clinical alteration of tooth and gingival shape for maximum esthetics
- Hands-on exercises
